LASER SENSOR FOR VOLUMETRIC SAFETY AND INTENTIONAL OPENING OF SWING DOORS

The LZR®-FLATSCAN 3D SW is a safety sensor designed for swing doors. Using laser time-of-flight technology, its volumetric detection field covers the complete opening area of the door, guaranteeing more comfort and safety to the users. Completely touchless. It prevents any contact with the user by avoiding sudden movements of door leaves.

The coverage of the hinge area and the leading edge area is increased to avoid any risk of contact.
